

# Preview of Browse API v1\_beta.5.0 Changes

## Topics

- New [Get Item by Legacy Id](#) call that retrieves items using a legacy item Ids
- New [Get Item by Item Group](#) call
- [Get Item](#) call, changes to the response, added a request header
- [Search for Items](#) call, added filters and changes to the response

## New Get Legacy Item call

The new **Get Item by Legacy Id** call lets you pass in legacy Ids and returns the item details and the REST item Id, which you can use in the Browse API **Get Item** calls. A legacy Id is an item Id returned by the eBay traditional APIs, such as the [Trading API](#) or [Finding API](#).

For more information about how to use legacy Ids with the Buy APIs, see [Legacy API compatibility](#) in the Buying Integration guide.

This call returns the item details, so it requires you pass in either the item Id of a non-variation item or the item Ids of both the parent and child of an item group (item with variations).

```
GET https://api.ebay.com/buy/browse/v1/item/get_item_by_legacy_id?
legacy_item_id=string&
legacy_variation_id=string
```

## URI parameters

- **legacy\_item\_id** - Specifies either:
  - The legacy item Id of an item that is *not* part of a group.<li>
  - The legacy item Id of a group, which would be the group parent Id.  
**Note:** If you pass in a group Id, you must also use the **legacy\_variation\_id** field and pass in the legacy Id of the specific item variation (child Id).
- **legacy\_variation\_id** - Specifies the legacy item id of a specific item in an item group. You must **always** pass in the **legacy\_item\_id** with the **legacy\_variation\_id**.

## Response

For a complete list of response fields, see [Get Item Calls response fields](#).

For an example of the JSON request/response, see [Get Legacy Item JSON response](#).

## New Get Item by Item Group call

The new **Get Item by Item Group** call, which replaces the **Get Item Group** call, improves the way variation information is returned and provides additional information, such as bid, estimated item availability, marketing discount, return terms, quantity sold, additional shipping, etc.

```
https://api.ebay.com/buy/browse/v1/item/get_items_by_item_group?item_group_id=string
```

## Changes to the response

The **Get Item by Item Group** call has the same response as the other **Get Item** calls with the following exceptions.

- Three additional fields:
  - **commonDescriptions** - An array of containers for a description and the item Ids of all the items that have this exact description. Often the item variations within an item group all have the same description. Instead of repeating this description in the item details of each item, a description that is shared by at least one other item is returned in this container along with the Ids of all the items that have this description. If the description is unique, it is returned in the **items.description** field.
  - **commonDescriptions.description** - The item description that is used by more than one of the item variations.
  - **commonDescriptions.itemIds** - A list of item Ids that have the description.
- All the other fields, which are the item details, are the same as the **Get Item** and **Get Legacy Item** calls except these fields are returned in a container named **items**. The **Get Item by Item Group** call returns the item details for each item in the group, so for each item in the group there will be an **items** container.

## Response

For a complete list of response fields, see [Get Item Calls response fields](#).

For an example of the JSON request/response, see [Get by Item Group JSON response](#).

## Get Item call changes

The following section describes the changes that were made to the **Get Item** call.

### Added X-EBAY-C-ENDUSERCTX contextualLocation

Although the **X-EBAY-C-ENDUSERCTX** header containing **contextualLocation** is optional, it is **strongly** recommended that you use it when submitting the **Get Item** call. This header increases the accuracy of the estimated delivery window information and is needed for the calculated shipping. You *always* include the country code and you must include the zip code if zip codes are used in that country.

### Changes to the response

The follow table compares the response from the prior release (**Previous**) with this release (**New**). The bolded text in the table indicates either new types/fields or types/fields that have been replaced or renamed.

Previous	New
	<b>estimatedAvailabilities</b>
	<b>estimatedAvailabilities.availabilityThreshold</b>
	<b>estimatedAvailabilities.availabilityThresholdType</b>
	<b>estimatedAvailabilities.deliveryOptions</b>
availabilityStatusForShipToHome	<b>estimatedAvailabilities.estimatedAvailabilityStatus</b>
	<b>estimatedAvailabilities.estimatedAvailableQuantity</b>
	<b>primaryItemGroup</b>

shippingOptions.type

## Response

For a complete list of response fields, see [Get Item Calls response fields](#).

For an example of the JSON request/response, see [Get Item JSON response](#).

## Search for Items call changes

The following section describes the changes that were made to the **Search for Items** call.

### Added filters

The following filters were added:

- **returnsAccepted** - Excludes items that cannot be returned to the seller
- **excludeCategoryIds** - Excludes items in the specified categories

### Changes to the response

The following table lists the fields that were added and the one type that was replaced.

Field or Type	Change	Description
itemSummaries.shippingOptions.maxEstimatedDeliveryDate	Added	The end date of the delivery window (latest projected delivery date).
itemSummaries.shippingOptions.minEstimatedDeliveryDate	Added	The start date of the delivery window (earliest projected delivery date).
itemSummaries.itemGroupType	Added	Indicates the item group type. Currently only SELLER_DEFINED_VARIATIONS is supported and indicates this is an item group created by the seller.  <b>Note:</b> This field is populated only for item groups (item with variations).
itemSummaries.itemHref	Added	A HATEOAS reference to the item.  <b>Note:</b> In the last release, this field was always populated. Now, it is populated only for group items (an item with variations).
Amount	Replaced with <b>ConvertedAmount</b>	This type defines the monetary value of an amount. It can provide the amount in both the currency used on the eBay site where an item is being offered and the conversion of that value into another currency, if applicable.  <b>Note:</b> <b>ConvertedAmount</b> has two additional fields; <b>convertedFromCurrency</b> and <b>convertedFromValue</b> .

## JSON request/response Get Item call examples

- [Get Item](#) call
- [Get Item by Item Group](#) call
- [Get Item by Legacy Id](#) call
